

# Sepsis and Coordination of Care

## Sepsis and Coordination of Care

HSAG's Efforts with Sepsis within Long-Term Care Facilities (LTCFs)

Health Services Advisory Group (HSAG)

## Objectives

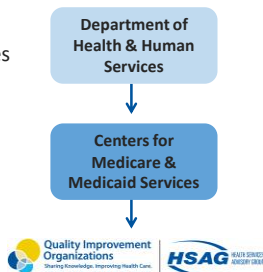

- Identify quality improvement programs that may help with sepsis efforts.
- Utilize tools and resources that may support your sepsis efforts.
- Recognize the importance of early recognition and intervention regarding sepsis in post-acute settings.

2

## What is a QIN-QIO\*?

- Funded by the Centers for Medicare & Medicaid Services (CMS)
  - QIN-QIO in each state
  - Dedicated to improving health quality at the community level
  - Ensures people with Medicare get the care they deserve, and improves care for everyone

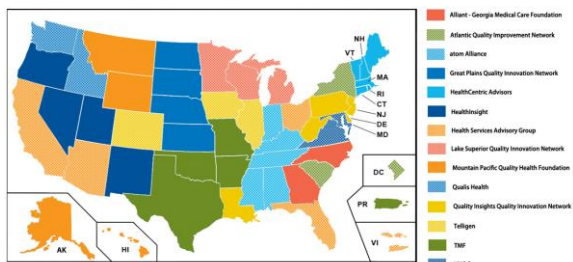

3

\*QIN-QIO=Quality Innovation Network-Quality Improvement Organization

### New National QIN-QIO Structure

4

---

---

---

---

---

---

---

---

---

---

### HSAG's QIN-QIO Responsibility

Nearly 25 percent of the nation's Medicare beneficiaries

HSAG is the Medicare QIN-QIO for Arizona, California, Florida, Ohio, and the U.S. Virgin Islands.

5

---

---

---

---

---

---

---

---

---

---

### Medical Case Review Structural Changes

CMS separated medical case review from quality improvement work creating two separate structures:

---

---

## Better Healthcare for Communities: Improve Coordination of Care

-  Reduce hospital readmission rates for Medicare Fee-For-Service patients by 20 percent by 2019.
-  Improve overall community health and support self-care of individuals in their homes.
-  Reduce adverse drug events (ADEs) that contribute to patient harm as a result of the care transitions process.
-  Convene community providers to collaborate on strategies for improvement in care coordination.

9

---

---

---

---

---

---

---

---

### What is a Hospital Readmission?

- CMS defines a readmission in this context as “an admission to a subsection(d) hospital within 30 days of a discharge from the same or another subsection(d) hospital.”
- Subsection(d) hospitals, per the Social Security Act, include short-term inpatient acute care hospitals excluding critical access, psychiatric, rehabilitation, long-term care (LTC), children's, and cancer hospitals.

<https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Readmissions-Reduction-Program.html>

### Why Focus on Rehospitalizations?

- Resident/patient quality of life/quality of care
- Survey and certification
- Future penalties
- Value-based payment (VBP)

---

---

---

---

---

---

---

---

---

### How Does Sepsis Fit Into Care Coordination?

---

---

---

---

---

---

---

---

---

---

Impact of Sepsis

- Sepsis is the most expensive diagnosis, leading to readmissions costing more than \$3.1 billion per year (2013 data).
- Sepsis is responsible for the most readmissions to a hospital within 30 days after a hospital visit (more than 191,000 readmissions each year).

---

---

---

---

---

---

---

---

---

---

First Effort: Early Sepsis Recognition in LTC and Home Health Settings Event

- First statewide swing at sepsis
- Supported by state and federal partners
- GAP analysis completed by attendees

---

---

---

---

---

---

---

---

---

---

Early Sepsis Recognition in LTC and Home Health Settings Event: GAP Analysis

- Recognize strengths and opportunities to improve
- Variety of categories including education, leadership, resources, and more
- Some standout results:
  - 70 percent of the attendees felt they had the resources to effectively deal with sepsis
  - Only 19 percent of the attendees performed case reviews to look for gaps in performance in regards to sepsis

---

---

---

---

---

---

---

---

---

---

## Sepsis and Coordination of Care

### Current Approaches to Sepsis: QI Programs

- Nursing Home Reducing Readmissions Preparation Program (RRPP)
- National Nursing Home Quality Improvement Campaign (NNHQIC)

---

### Feedback From the Frontlines

#### Sepsis in the elderly is often hard to identify

- Symptoms commonly used to identify infection and organ dysfunction are masked in older adults with multiple comorbidities
  - SNFs and home health agencies (HHA) feel like tools and resources for the post acute areas were not readily available
  - Acute care facilities stated that the post acute partners were sending the patient when they were crashing
  - How do we get two care partners to agree on an approach?

20

---

---

---

---

---

---

---

---

---

---

### The Ask

- SNF and HHAs
  - Provide tools that address our unique population
  - Understand our capabilities
  - Help us communicate in the same language with providers and partners
- Acute Care Facilities
  - Identify a potential Sepsis case as soon as possible
  - Intervene if the resident condition is appropriate
  - Transfer for evaluation prior to deterioration

Communicating Concerns

24

Communicating Concerns (cont.)

**Post-Acute Situation Background Assessment Recommendation (SBAR) for Sepsis**  
*Systemic Inflammatory Response Syndrome (SIRS)*  
Sepsis = two or more SIRS criteria and suspected or documented infection

**Assessment:**

1. Is patient hypertensive \_\_\_\_\_ (systolic blood pressure 100 mm Hg or less)
2. Patient's mental status is: Normal/Abnormal (compared to baseline)
3. Most recent weight is: \_\_\_\_\_
4. Pulse oximetry reading (SaO2) is now \_\_\_\_\_ Previous reading \_\_\_\_\_
5. Urine output is \_\_\_\_\_ ml per hour or \_\_\_\_\_ over the last 8 hours

**Recommendations:**

1. Based on positive screening criteria notify attending provider.
2. Obtain orders for lactate level and blood cultures if possible, but administer broad spectrum antibiotics and strong Ag central-line flush with rapid infuser even if blood work not done.
3. Consider transfer to an acute care facility based on patient presentation, availability of resources, and response to interventions.

---

The Results

- Stop and watch
  - Proven effectiveness as an early intervention tool
  - Consistent implementation is crucial
    - Challenges: turnover, training, off shifts
- Situation, Background, Assessment, Recommendation (SBAR)
  - Streamlined processes
  - Education tool for clinical staff members and providers
  - Standardized communication
    - Challenges: the same
- Ohio Hospital Association Data
  - 15.5% reduction since 2014 Baseline
